Hello,

We would be happy to be involoved in the construction of the McNary-John Day Project... could you put me in contact with the appropriate people.

Thanks,

Jeff Ulman - Superior Electric

RECEIPT DATE: APR 22 2002

The BPA is proposing to build an additional transmission line from the McNary Substation to the John Day Substation because the current transmission lines are at capacity and power demands are greater than the current transmission lines can accommodate. The proposed 79 mi long 500 kV transmission line is to be constructed mostly in existing right-of-way. The proposed alternatives in the draft EIS do not appear to have the potential to negatively affect Bureau of Reclamation projects or facilities.
